

SRIRAM J

Cyber Security Student | Full-Stack Developer

sriramj0107@gmail.com • +91 9025008447 • Chennai, India • [LinkedIn](#) • [GitHub](#)

SUMMARY

Cyber Security student with hands-on experience in network security, threat detection, and intrusion detection systems. Built CyberGuard IDS, a full-stack AI-powered IDS combining ensemble ML (XGBoost, Random Forest, Isolation Forest) with a real-time monitoring dashboard, and has offensive security experience through structured penetration testing and CTF competitions spanning reverse engineering, binary exploitation, forensics, and OSINT. Proficient in Python, Wireshark, Nmap, and Kali Linux toolchains.

EXPERIENCE

Cyber Security Intern

May 2026 – Jun 2026

Career Solutions — Chennai, India

- Performed security assessments and vulnerability analysis on client systems and network infrastructure using Wireshark and Nmap.
- Authored security reports documenting identified risks, findings, and recommended mitigation strategies.
- Applied ethical hacking techniques in controlled test environments to evaluate system defenses.
- Collaborated with the security team on incident response workflows and security awareness activities.

Full Stack Developer Intern

2025

Cognifyz Technologies — Remote

- Developed and maintained responsive web application components using HTML5, CSS3, and JavaScript, integrating RESTful APIs and backend services.
- Participated in debugging, testing, and performance optimization to improve application stability and speed.
- Applied Git and GitHub version control practices throughout the software development lifecycle.

PROJECTS

CyberGuard IDS — AI-Powered Intrusion Detection System

Capstone Project

- Built a full-stack intrusion detection platform trained on CICIDS2017, combining XGBoost, Random Forest, and Isolation Forest to classify network attack patterns, with a Flask backend and live packet capture via Scapy/Npcap.
- Built a Chart.js/Leaflet.js dashboard for real-time traffic and geolocated threat mapping, with Windows Firewall (netsh) auto-blocking and a Claude API-powered alert triage chatbot.
- Authored a full Design Thinking report and delivered a 30-slide technical presentation covering architecture, model evaluation, and results.

CTF & SECURITY COMPETITIONS

- Reverse Engineering: analyzed a UPX-packed ELF binary, reversing XOR and arithmetic obfuscation layers to recover the embedded flag.
- Binary Exploitation: exploited a heap overflow vulnerability (ovhparse challenge) to gain control of program execution.
- Digital Forensics: recovered secrets from a corrupted disk image by reconstructing and analyzing Git commit history.
- Applied Cryptography: analyzed a Diffie-Hellman key exchange captured in a pcapng file to recover the shared secret.
- OSINT: geolocated a target from a single image using visual and metadata clues alone.

SKILLS

Languages: Python, Java, JavaScript, C, SQL, HTML5, CSS3

Security: Network Security, Ethical Hacking, Threat Detection, Vulnerability Assessment, Packet Analysis, Cryptography, Incident Response, Secure Coding

Tools: Wireshark, Nmap, Metasploit, Gobuster, Hydra, LinPEAS, John the Ripper, Npcap, Git/GitHub, Linux, Kali Linux

CTF Skills: Reverse Engineering, Binary Exploitation, Digital Forensics, Applied Cryptography, OSINT

Core CS: Data Structures & Algorithms, Operating Systems, Computer Networks, Blockchain

Languages: English (Professional), Tamil (Native)

EDUCATION

B.E. Computer Science & Engineering (Cyber Security)

Expected 2028

Sathyabama Institute of Science and Technology, Chennai

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL Certified — Cryptography & Network Security (IIT Level), Python, and Java • Cisco Junior Cyber Security Analyst Career Path • Ethical Hacking Hands-on Training (E-Certificate) • Great Learning C for Beginners
